Revetment Rip Rap

LOCAL AGGREGATES

Revetment Rip Rap is a durable, angular stone designed to prevent soil erosion along shorelines, lakes, and ponds by reducing the impact of concentrated runoff. Additionally, it is used to stabilize slopes and embankments, helping to slow water flow and minimize soil displacement. With stone sizes ranging from 4″ to 8″, Rip Rap provides long-lasting protection for both natural and engineered landscapes.

Delivery Options:
Bulk via Single Axle Dump Truck, Tri-Axle Dump Truck, or Quad-Axle Dump Truck.

SPECIFICATIONS

Item: LO-RIPRAP0048
Size Range: 4” – 8”
Material: Crushed Limestone
Coverage: 45 sf/ton

Usages: Soil erosion along shorelines, lakes, and ponds.
